### DETERMINATION OF NONSIGNIFICANCE (DNS)

**Name of Proposal: MILLTOWN ISLAND HABITAT RESTORATION PHASE 2**

#### **Description of Proposal:**

On Washington Department of Fish and Wildlife's Skagit Wildlife Area Lands, additional hydrology restoration and re-vegetation work would be done on Milltown Island so the estuary-influenced site can more fully function and benefit Chinook and other salmon.

The currently proposed project will use explosives to remove approximately 1,440 Linear Feet (LF) of dike (0.46 acres) along Steamboat Slough on the west side of Milltown Island. The excavation will lower the elevation of the diked area by approximately four feet, roughly matching the surrounding marsh surface elevation. Additionally, 176 LF of channel will be excavated to allow water to run through the diked areas and into the interior marshes. These actions will restore river and tidal flows to the interior marshes on the island and will increase access for juvenile Chinook and other salmon. Site-appropriate native scrub-shrub vegetation will be planted within the areas affected by dike removal and channel construction activities.
